# Ülari Laurson

Senior Project Manager | PMP & PRINCE2 Agile | Technical Lead  
(Java/Angular) | AI Engineer (LLMs, RAG, Agents) | Increasing  
Profitability in Secure IT  
Tartu, Tartumaa, Estonia

## Summary

I am a Project Manager with a technical foundation in Computer Science and over 8 years of experience across the software development lifecycle. My background as a Full-stack Engineer allows me to bridge the communication gap between technical teams and business stakeholders, ensuring that complex security requirements translate into profitable, delivered products.

Currently, I specialize in leading cross-functional teams of up to 15 members within the digital identity and high-assurance security sectors. By refining resource planning and removing friction from delivery workflows, I have successfully improved department profitability by 20%.

Beyond core project management, I am an AI-minded leader currently deepening my expertise in Generative AI. My focus is on moving beyond basic prompts to building production-ready products using RAG (Retrieval-Augmented Generation), AI Agents, and LLM engineering.

### Core Competencies:

- \* Leadership: PMP & PRINCE2 Agile certified, OKR implementation, and strategic resource planning.
- \* Technical Roots: Full-stack development (Java, Angular) and DevOps (Docker, CI/CD).
- \* AI Specialization: Hands-on implementation of RAG, AI Agents, and QLoRA fine-tuning.
- \* Strategic Operations: Stakeholder management, workflow optimization, and creating realistic technical roadmaps.

I care about building useful things with people who take pride in their work. If you are working on a software project that needs more

structure, clarity, or a bridge between technical and business goals, let's connect.

## Experience

Cybernetica  
Project Manager  
May 2022 - Present (4 years)  
Tartu, Tartumaa, Estonia

Leading the delivery of high-stakes digital identity and security solutions by managing a diverse, cross-functional group of 10–15 developers, security engineers, and researchers. I act as the primary translator for complex technical requests, creating realistic roadmaps and staffing plans that protect the team from burnout while meeting high-assurance security standards.

### Key Achievements:

- \* Increased Profitability: Optimized department profitability by 20% in 2024 through refined resource planning and the removal of friction from project delivery workflows.
- \* Reduced Rework: Bridged the gap between researchers and developers by translating complex security requirements into actionable technical roadmaps, significantly reducing project overhead.

### BitWeb OÜ

5 years 3 months

Project Manager  
April 2019 - December 2021 (2 years 9 months)

- \* Managed the full software product lifecycle, including the successful concept-to-launch delivery of a proprietary logistics maintenance tool.
- \* Introduced and managed a company-wide OKR framework to align organizational goals with daily team execution and decision-making.
- \* Led Agile planning and maintained smooth communication between clients and technical teams to define scopes and timelines.
- \* Leveraged an engineering background to jump between technical discussions and project planning, ensuring alignment across all stakeholders.

Software Engineer

October 2016 - December 2021 (5 years 3 months)

Estonia

- \* Developed and maintained web applications using Java for the backend and Angular for the frontend.
- \* Reduced manual overhead and increased team predictability by automating deployments and managing CI/CD pipelines via Bamboo and Docker.
- \* Managed DevOps setups and handled features from initial idea through to implementation to ensure system reliability.
